

Last round of reviews

- **We need to modify the categories so it is consistent with the code outputs** (instead of compliant and non compliant. Indeed; legally, we cannot conclude compliance. We can just assess the level of risk)

Here are the different outputs. It should be reflected anywhere we refer to this analysis

Niveau	risk	status
Géométrie invalide	indeterminate	Non-compliant geometry
Analyse impossible	indeterminate	Could not assess
Risque négligeable	negligible	Negligible risk
Risque non négligeable	non_negligible	Non-negligible risk

Please see below the parts that are impacted by the change:

- **I realized I omitted the most important thing in the DDS statement... Actually, the DDS statement is lacking a few things that we need to add if we want to finalize a proper MVP that can be used with real clients.** Our current DDS PDF is limited and must evolve from a simple geolocalisation report into a complete EUDR deforestation and traceability risk assessment.

As it is the case now, the DDS should be generated for the entire lot and aggregate all parcel analyses.

For context, the DDS outputs must explicitly support:

- EUDR Article 9 (Geolocation) : GeoJSON, Polygon coordinates, EPSG:4326
- EUDR Article 5: Forest status at 31 Dec 2020, Post-2020 deforestation check
- Full traceability: Data source versions, Audit trail, Request IDs, Timestamps, ChecksumS
- TRACES-ready export: Standard GeoJSON FeatureCollection, One feature per parcel, Lot metadata included

In the current version, we only capture the geolocalisation part but the whole reason for creating this platform is also the deforestation checks:

1. In the “plot” and “lot” page

Can you add after the geolocalisation, the summary of the analysis (aggregated but also a table with each parcel)? In the image below the first comment refers to the 100%, which represents the percentage of parcels with negligible risk.

- (1) For the aggregated summary: we can highlight the main figures for the whole lot
- (2) For the detailed table per parcel: We can keep the same table as the one we included in the DDS statement but add the following columns (please refer to the colors of highlights):
 - **Niveau de risque:** Tells if the risk is negligible or not, based on the status
 - **Fôret en 2020:** this provides the output of the JRC analysis as a percentage (e.g, 100%, 95%)
 - **Perte 2021-2024:** this provides the area of forest loss in hectares between 2021 and 2024
 - **Alerte après 2025:** this provides the area of forest loss in hectares after 2025
 - **Zone protégée:** Yes or no and this indicates if the parcels is located in a protected area

For your reference, we tested a few parcels and here was the output of our code. Please let us know if you don't see this:

2026-06-21 10:52:10,553 [INFO] [11/44] ABANDA Ralien pl.gpx

2026-06-21 10:52:14,416 [INFO] **RISQUE : NEGLIGIBLE (Negligible risk)**

2026-06-21 10:52:14,416 [INFO] Nettoyage : corrigé: Fermeture conservatrice automatique, Réparation de l'auto-intersection | écart 57.1 m (8.4%) → négligeable

2. We would also need to improve the structure of the DDS PDF because as you can see we only have the geolocalisation but the analysis is also important since it is the function of our platform. The updated DDS is available on figma.

The DDS PDF should contain:

- Cover page with document ID, issue date, issue time and Lot information

Audit Trail

Métadonnées d'analyse

Généré le	21 Juin 2026 09:36 UTC
Version	IDB EUDR Script v1

- Data Sources, versions and purpose as outline in the document

Sources	Version	But
JRC GFC2020	v3 (release 2023-03)	Détermine le niveau de référence de la couverture forestière au 31 décembre 2020
Hansen	GFC-2024-v1.12	Détecte la perte de couverture forestière (déforestation) entre 2021 et 2024
GFW Alerts	D	Détecte les alertes de déforestation à partir de 2025
WDPA		Identifie les chevauchements entre les aires protégées

- Disclaimer (please check end of page 4 in the figma DDS)

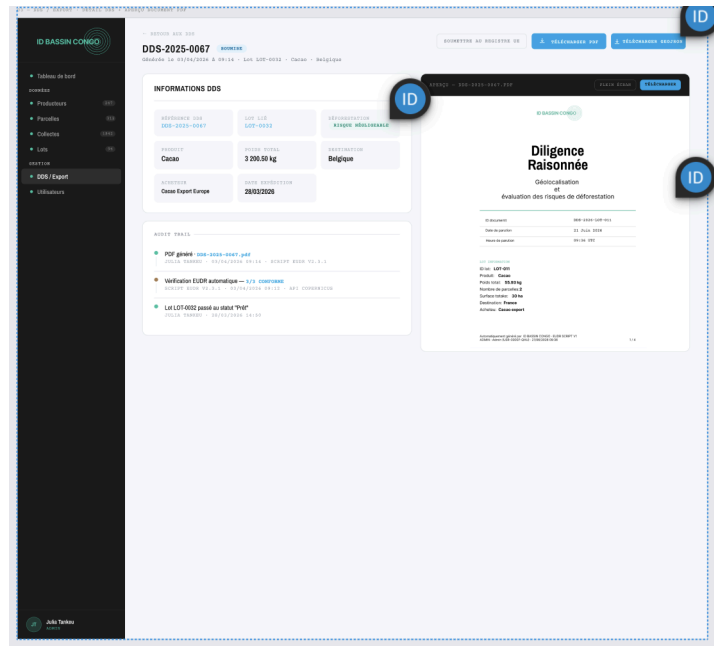

Avertissement

ID Bassin Congo met cette analyse à disposition en tant qu'outil d'évaluation des risques destiné à aider les producteurs, les coopératives, les exportateurs et les acheteurs à respecter leurs obligations de diligence raisonnable au titre du règlement (UE) 2023/1115 (EUDR). Le présent document ne constitue ni un avis juridique ni un conseil juridique, ni une preuve de conformité à l'EUDR, ni une certification. Cette évaluation reflète les données disponibles au moment de l'analyse.

ID Bassin Congo ne donne aucune garantie quant à l'exactitude ou à l'exhaustivité de cette évaluation. Nous déclinons toute responsabilité pour tout dommage indirect, consécutif ou particulier résultant de l'utilisation du présent document et de l'analyse qui le sous-tend.

3. Can you please change the look of the DDS overview as follows

4. As explained earlier, we would need the ability to generate a downloadable GeoJSON file containing: DDS Summary card, DDS risk table per parcel, Audit trail.

For the plot we can have something like:

```
{ "type": "FeatureCollection", "features": [ { "type": "Feature", "properties": { "ProductionPlace": "Sankuru, RDC", "ProducerCountry": "CD", "ProducerName": "MBOYO Jean-Paul", "Area": 2.3 }, "geometry": { "type": "Polygon", "coordinates": [[[18.234567, 2.345678], [18.234890, 2.345234], [18.235012, 2.346001], [18.234567, 2.345678]]]] }
```

We should be able to download it on the parcel page, please see as it is done on figma

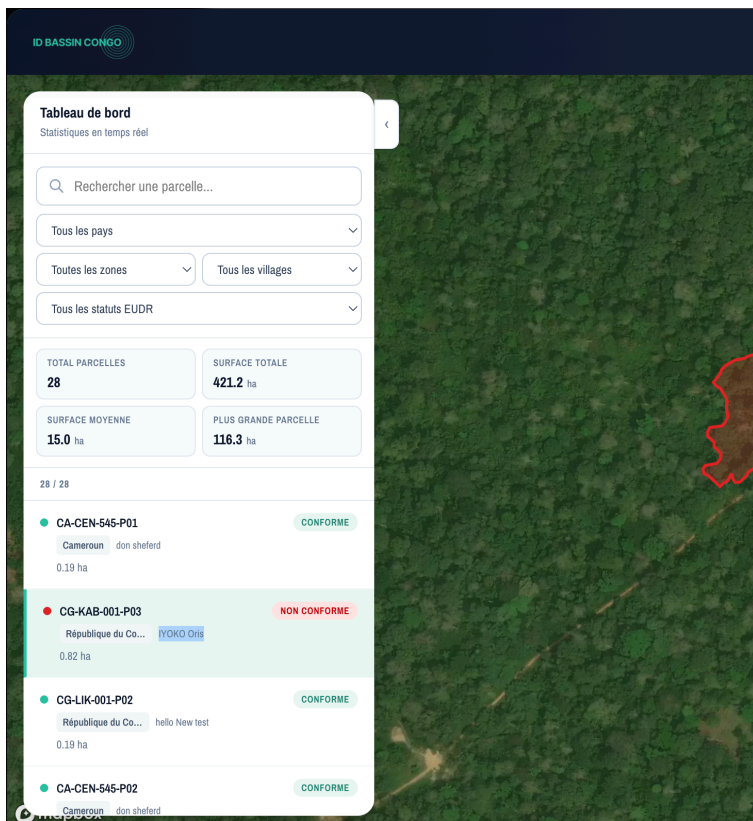

For the lot we can have something like:

```
{ "type": "FeatureCollection", "features": [ { "type": "Feature", "properties": { "ProducerName": "MBOYO Jean-Paul", "ProducerCountry": "CD", "ProductionPlace": "Sankuru, RDC", "Area": 2.3 }, "geometry": { "type": "Polygon", "coordinates": [[[18.234567, 2.345678], [18.234890, 2.345234], [18.235012, 2.346001], [18.234567, 2.345678]]]] }, { "type": "Feature", "properties": { "ProducerName": "IYOKO Oris", "ProducerCountry": "CD", "ProductionPlace": "Sankuru, RDC", "Area": 1.8 }, "geometry": { "type": "Point", "coordinates": [18.512345, 2.678901] } }, { "type": "Feature", "properties": { "ProducerName": "BOLAMBA Marie", "ProducerCountry": "CD", "ProductionPlace": "Équateur, RDC", "Area": 5.1 }, "geometry": { "type": "Polygon", "coordinates": [[[18.601234, 2.789012], [18.601567, 2.789345], [18.601890, 2.789678], [18.601234, 2.789012]]]] }
```

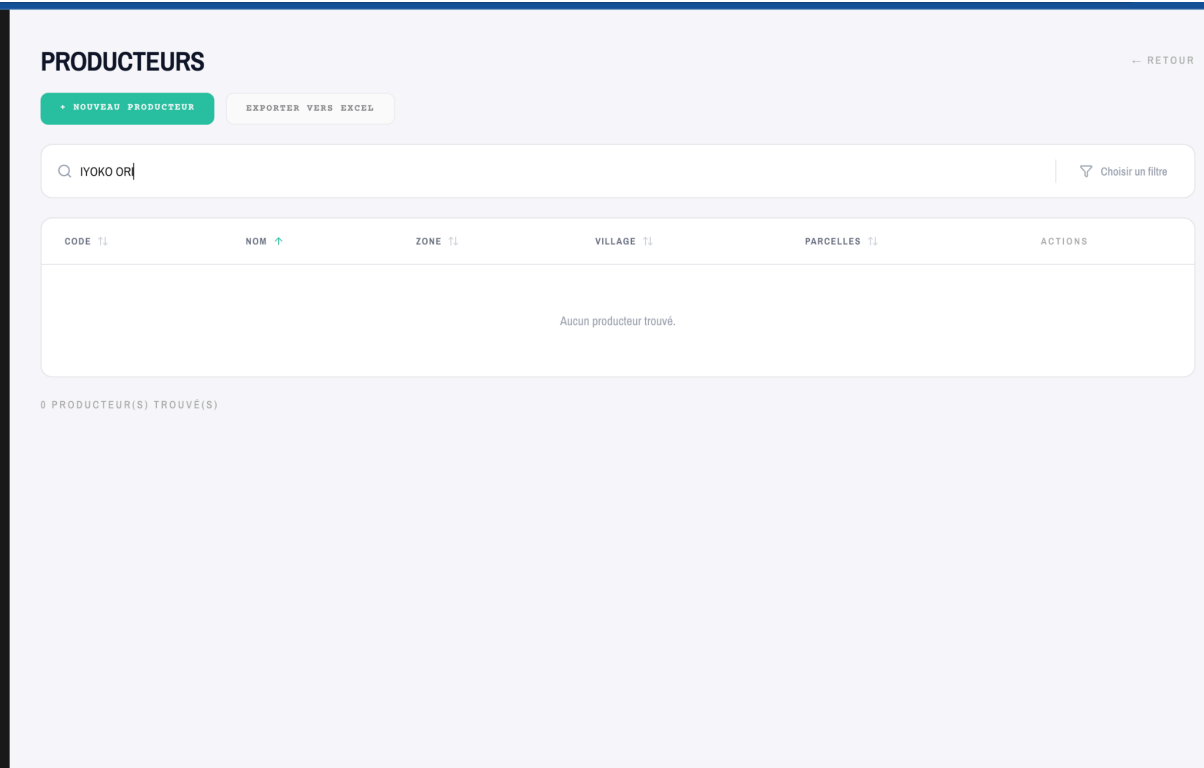

5. Platform Usability, Search, and Data Management Improvements

We should be able to download it on the lot pages, please see as it is done on figma

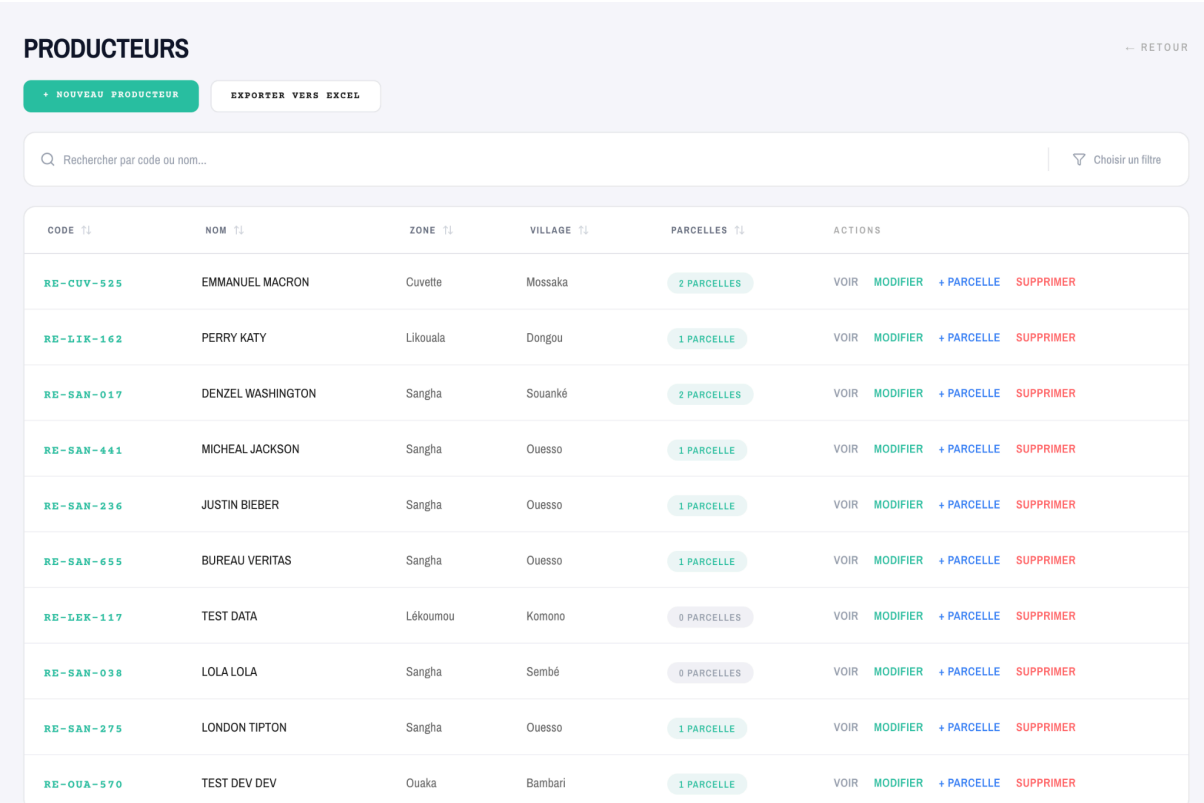

- a) If possible, we should be able to click on a producer and open their profile page to view their details and parcels. Perhaps we could add a button for this (in the map/dashboard).

- b) All search pages should display producer names and references in a clear, intuitive, and user-friendly way. (producers pages, parcels page, collections page, lots page). For example, when searching for a producer, the results disappear as soon as a space is entered after the name. Likewise, if we try to search using the producer's full name rather than just the last name, no results are returned. The search functionality should support partial matches, full names, and names containing spaces to make it easier for users to find the correct producer.

c) If possible, we should add a selection feature across **all pages** so that users can select multiple items and perform bulk actions. For example, this would allow us to delete multiple producers, parcels, or other records at the same time instead of handling them one by one.

- d) It would be helpful if the platform could **prevent duplicate parcel entries**. If the same parcel is added more than once, the system should detect it and display a warning or block the duplicate entry. For example, even if the GPX file has a different name, the platform should be able to recognize when it contains the same parcel boundaries and GPX data as an existing record. In such cases, it should warn the user or prevent the creation of a duplicate parcel.

6. Very general comments that apply to all pages

- Could you please make sure that the translation from french to english (and the other way around) is properly working?
- Please, also make sure that texts are big enough so they can be read easily
